SD Half Layer Top Cover Plate

Not every application permits the installation of a complete layer of the ACO StormBrixx geocellular system. Areas with depth restrictions and/or high ground water levels can require the installation of a shallower system.

A top cover plate is available for StormBrixx SD for these applications, which thereby reduces the height of the layer by almost 50%.

The half layer top cover plate clicks onto a half-module in a similar manner as another half-module.

Part #314094
